

Roamly Groups: Go-to-Market Strategy

Coordinated group booking, split payments & shared itineraries — launch strategy for the celebration-trip organizer segment

TARGET SEGMENT

The **trip organizer** in friend groups planning celebration trips — bachelor/bachelorette parties, reunions, milestone birthdays.

Full buying authority, acute pain: chasing friends for payments, juggling fragmented bookings, tracking who's confirmed. Fixed date = urgency + social pressure.

GTM MOTION

PLG primary, CLG secondary.

Guest-to-signup funnel, not a forced gate — preserves minutes-to-value while still tracking acquisition.

PRIMARY GOAL

Acquire — not Retain or Expand.

Success = a funnel: guest exposure → branded experience → eventual signup. Not a binary event at time of invite.

POSITIONING

"For friend groups planning celebration trips, Roamly Groups is the trip coordination tool that replaces chasing payments and juggling bookings with one shared link — because your friends deserve a great trip, not a project manager."

KEY MESSAGES

01

For the organizer

"One link. Everyone's booked, everyone's paid, you're done chasing." Speaks to the acute pain point directly.

02

For the group

"See the plan, pay your share, show up." Low-friction entry — no account required to engage.

03

For everyone

"The same vetted local experts Roamly's known for, now built for groups." Leverages existing trust, not just a new feature.

CHANNEL APPROACH

- **PLG core:** In-product prompts for repeat bookers ("Planning a trip with friends? Try Groups") — targets likely organizers.
- **CLG amplification:** Seed power users in Roamly's travel communities (Reddit, FB groups); encourage post-trip sharing back into those channels.
- **Guest funnel:** Branded guest payment/itinerary pages with a soft signup nudge post-trip — no hard gate.

SUCCESS METRICS (V1)

PRIMARY

Guest-to-signup conversion rate — % of non-account participants who create a Roamly account within 90 days of a group trip. Validates the virality thesis directly.

SECONDARY

Organizer activation rate — % of created trips reaching full booking/payment completion. Validates the core PLG loop.
